## **Amendment to the Drawings:**

The attached sheet of drawings includes changes to Fig. 2. In Figure 2, reference numerals 56, 49 and 69 have been changed to 58, 44, and 64 respectively to make them consistent with the specification.

#### Remarks

Reconsideration of this patent application is respectfully requested. Claims 1-3 and 12-15 stand rejected on prior art grounds. Claim 4-11 stand objected to as being dependent on a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. In this regard, claim 1 has been amended to include the allowable subject matter of dependent claim 4. Hence, independent claim 1 is now believed to be allowable.

### New Claims 16-20:

New claims 16-20 have been added and are different in scope from claims 1-16. No new subject matter has been added as the specification on, for example, pages 4 and 5 and Figure 2 provides support for the new claims. The citation of support is not intended to limit the new claims to the specific examples described in the specification and drawings.

New independent claim 16 is directed to a wireless internet system including, for example, "a power supply receiving input power of at least one of a plurality of types . . . ." As discussed during Applicant's August 7, 2007 interview, the U.S. Pat. No. 6,876,642 to Adams et al. does not teach or disclose such a feature. Adams discloses "a wireless local area network communication system for a vehicle to provide a voice and/or data connection from a wireless wide area network to a wireless local area network and on to a vehicle wired bus" (col. 2, lines 14-18). Other than disclosing a vehicle in its most general sense, Adams does not expressly disclose any details regarding a power supply and its input power types, as claimed. Therefore, it is respectfully submitted that new independent claim 16 is patentable over the Adams reference.

Dependent claims 17-19 are also respectfully submitted to be patentable on their own merits. Dependent claim 17 describes that the plurality of input power types includes "a DC power input type and an AC power input type." Dependent claim 18 describes that the plurality of input power types includes "a plurality of DC power input

types." Dependent claim 19 describes that the plurality of input power types includes "a plurality of DC power input types and a plurality of AC power input types." It is respectfully submitted that Adams does not teach or disclose these limitations.

New independent claim 20 is of different scope than new claim 16. Claim 20 is directed to a wireless data system having "a power means for receiving input power of at least one of a plurality of types . . . ." As described above, Adams does not teach or disclose such a limitation. Therefore, it is respectfully submitted that claim 20 is patentable.

### **Supplemental Information Disclosure**

A supplemental information disclosure statement accompanies this response. The presented claims are respectfully submitted to be patentable over the references disclosed therein.

## **CONCLUSION**

It is respectfully submitted that the pending claims, having been given their broadest reasonable interpretation, are patentable. Based on the foregoing, Applicants believe that all of the claims in this case are now in a condition for allowance and an indication to that effect is earnestly solicited. Furthermore, if the Examiner believes that additional discussions or information might advance the prosecution of this case, the Examiner should feel free to contact the undersigned at the telephone number indicated below.

Respectfully submitted,

Nenad Pejic (Reg. No. 37,415) Calfee, Halter & Griswold, LLP
